

From the Right idea to the right Products

Your proven Partner for
successful OEM Products

Esterline

LRE Medical
Esterline Corporation

Experience you can trust

You can rely on us

Founded in 1961 in Munich, Germany, LRE is an innovative, high-tech oriented company in the fields of in-vitro diagnostics and medical technology. We focus on developing and producing precision measuring systems on behalf of well-known diagnostic companies in Europe and the USA.

Our technical spectrum

LRE focuses on three core elements – covering the full range of analyzing various parameters:

- Optical measuring technologies
- Electrochemical measuring technologies
- Fluidics Management

Close to the market

LRE is internationally active. Our research and development department is located in Munich, Germany, our production and assembly facilities are based in Nördlingen, Germany. At both locations the goal is to create innovative products of the highest quality while tailoring them to the customer's needs. As a result, we are a highly valued OEM partner – worldwide.

Part of a strong network

LRE Medical GmbH is a subsidiary of Esterline Corporation, headquartered in Bellevue, Washington, USA. Our network includes a wide range of high-performance and economically viable corporate subsidiaries. Working together enables us and our customers to meet the ever-changing challenges of a market in flux. Not only today, but also in the future.

Efficient and Competent

Use our Know-How to increase your Business

LRE is an ideal partner for developing and rapidly launching excellent solutions.

Our product experience includes:

- In-vitro Diagnostic Applications
- Therapeutic Applications
- Laboratory Automation
- Life Science Applications
- MedTec Applications

From the first idea to the final design, we provide the product development capabilities that your products need to succeed in today's global market.

Development capabilities:

- Systems engineering
- Software design and development
- Electronics design and development
- Mechanical engineering
- High precision motion control
- Fluidics management
- Optics design and development
- Verification, validation and documentation

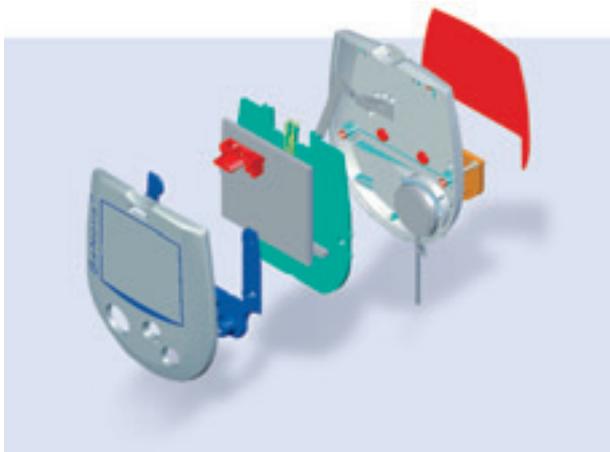

A host of advantages

With LRE your project is in good hands. One partner for all your instrumentation needs. We ensure that all our R&D and assembly activities adhere to strict quality-management guidelines and certified standards:

- ISO 9001/EN 13485
- In-vitro Diagnostic Directive 98/79 EG
- Medical Device Directive 93/42/EWG
- FDA Registration for Class II, III Medical Devices
- UL Certifications.

A Process that guarantees Success

From Definition to Design to finished Product

Product development activities are conducted in Munich. Here our engineers search for innovative procedures that will ensure the conception of products that make analyzing and processing activities easier and more cost-effective to complete. Creative ideas, expert market knowledge, and the extensive experience that is required to determine the feasibility of procedures at an early stage, are characteristic of the capabilities we offer.

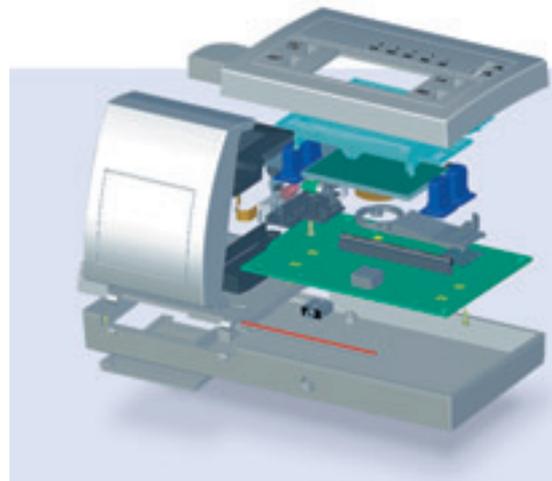

Highly competitive products

Our objectives determine the activities of the entire development process. For this reason we involve our manufacturing specialists in the development process long before the first prototype is completed. After all, their know-how is indispensable when it comes to transforming ambitious ideas into viable products. Products that can only result from the highest quality production standards.

Comprehensive testing

Each of our products is thoroughly tested. This applies to the selection and testing of materials, the design, development, proper tooling and production logistics. Due to our many years of experience, we are able to condense the entire development process – from the first idea to the last inspection: Resulting in a great economical benefit for our customer.

Nördlingen: Your Gateway to the World

We will also assume responsibility for all packaging, posting, customs and delivery requirements. And, if requested, we will also perform any needed service and maintenance.

Experience you can trust

Contact us Today

We are the partner you need to develop and produce the measuring and medical technology you want. That's because we accompany you every step of the way: from the idea to serial production, ensuring that all products are properly tested, produced and delivered to your door in a timely manner.

Outstanding references

As a high-performance OEM partner, we enjoy the trust and confidence of well-known corporations – many of whom we have worked with for years or even decades. Customer satisfaction is our highest priority. And we can prove it. Contact us today for details.
