

Overview

Esterline Interface Technologies specializes in creating state-of-the-art user interface devices for well-known OEMs throughout the world. Our product brands are on the cutting edge of specialized medical equipment, custom-designed data input components, advanced defense solutions, and high-tech gaming applications.

Advanced Input Systems operates a world-class, ISO 9001:2008 certified facility providing full service, design to manufacture methodology for its customers. Specializing in custom input devices, control panels, and application specific control solutions, Advanced Input Systems designs and manufactures touch, sensing, and control solutions for Original Equipment Manufacturers (OEMs) in the medical, gaming, industrial, marine, transportation, and defense industries.

Memtron Input Components produces custom designed input components including membrane switches, passive and active PC board-backed switches, elastomeric keypads, and touch screen integrated panels. A Memtron device can be found in virtually any application imaginable from hospital surgical rooms and restaurants to manufacturing plant floors and oil rigs.

LRE Medical GmbH is a leader in optical and amperometric analytical systems from low end/low cost single parameter analyzers to high-end spectrometers. LRE Medical's ISO 9001:2008 certified facility is located in Germany and is primarily focused on invitro diagnostic devices and med-tech applications for major pharmaceutical companies.

Founded in 2004, **Esterline Input Devices (Shanghai) Ltd.** supports major customers in Asia and provides manufacturing and material management capabilities for customers worldwide with interest in products with Asian content.
