Communication Systems

## Racal Acoustics Lightweight Headsets RA112 Jetlite Control-Room Headset

Reliable, comfortable headset for  
the professional communicator

## Versatile RA112 Jetlite headset optimized for clear speech, long-term comfort, plus compatibility with most equipment

The RA112 Jetlite headset is extremely lightweight, comfortable, and ideal for continual use in stressful environments, including air-traffic control, flight decks, broadcasting, call centers, and more.

The headset consists of a padded, lightweight spring headband and two tough molded ear shells with integral earphones and circumaural cushions, offering stability and comfort for long periods without undue pressure.

Many versions are available for most equipment. An amplifier simulating carbon-microphone performance can be included, if required.

### Features and Benefits

- Circumaural cushions, low headband force, and padded headband cover for wearing comfort
- Optimal passive attenuation to help concentration while maintaining situational awareness
- Single or dual earphones
- Quick-release termination from earphone down-lead
- Earphones with various impedances and wiring options
- Microphones with various impedances and sensitivities
- Fully flexible or rigid boom arms
- Cabling length and termination options
- Optional ancillary devices
